

Training Event
Mobile Mapping using ArcPad

Venue: OSL Training Centre, Upper Hill Nairobi
Date: March 5th to 6th 2012
June 6th to 7th 2012

Overview

Mobile GIS is the expansion of a Geographic Information System (GIS) from the office into the field. ArcPad, ESRI's mobile GIS software is used to capture, display, analyze and edit geographic information in the field. It provides stand-alone GIS technology, including database access and global positioning system integration to field users via mobile devices. This 2 day course covers the complete Mobile GIS workflow and participants learn the basic skills that will prepare them for using ArcPad in their daily work. The course teaches how to use ArcMap for the preparation of data and maps for field work, how to capture and edit data in the field using ArcPad, and how to transfer field edits to an existing GIS database using ArcMap.

Cost: (VAT Exclusive):

KES 17,000

10% Discount available for large groups (3 and above)

Who should attend?

Those who are interested in deploying Mobile GIS solutions in their organization i.e. utility workers, maintenance crews, law enforcement officers, census workers, Biologists, Researchers and others who collect and update spatial data in the field. Those having experience with windows mobile devices, GIS, and GPS use will have an added advantage. Knowledge of coordinates systems, datums, projections and ArcGIS is highly recommended.

Goals

Participants completing this course will be able to: effectively collect, update, analyze and process spatial data using ESRI's ArcGIS and ArcPad software with the use of GPS receivers, and other supported devices.

Topics Covered

- **GPS Fundamentals;**
- **Displaying Data in ArcPad;**
- **Editing and Updating Data; and**
- **ArcPad and ArcGIS Integration.**
